# Electronic Health Information (EHI) Export Documentation

Instructions to initiate single patient export of EHI are available in the user guide.

For a bulk/multi-patient export of EHI, please contact support by creating a support ticket.

When data is exported from the system, it will be available for download as a .zip file. Once downloaded, the file can be unzipped to reveal a folder of files. The folder will contain the following files:

.csv files - these include all the patient data in patient tables. The files will have a header row with the field names listed, followed by the patient data in a comma-separated format. Find definitions of each field name in the below Patient Data Tables.

.xml files - there will be one main ccda.xml that will be an export of all patient ccda-compatible data. There may be other ccda files with a 32-digit id after ccda\_ in the file name (ie. ccda\_123456789.xml). These ccda's are referrals and their associated referral information can be found in the patient referrals csv by cross-referencing the ccda\_id inside this csv with the filename.

.pdf files - There are several types of files that may be exported as PDFs.

- SoapDoc\_ files include all visit data from a particular patient visit.
- · document\_ files are chart documents that may have been scanned or otherwise uploaded into the patient chart.
- · Labs\_ files are PDF lab results.
- formletter\_ files are letters the clinic has generated inside the patient's chart
- OB\_ files include all pregnancy-related visit data

#### **Patient Data Tables**

patientinfo - contains basic identifying information about the patient (dob, chart number, ssn), demographic information for the patient, and some medical or social history questions as customized by the clinic.

charges - all CPT charges associated with the patient's account

healthmaintenance - scheduled recurrent diagnostic labs or tests the provider associated with the patient

ob - OB report of pregnancy-related visits

patient\_advforms - online patient forms

patient\_codes - codes of various code systems associated with the patient

patient\_forms\_data - forms filled out for the patient

patient\_guarantor - guarantor information and demographics associated with the patient

patient\_letters - letters written by the clinic that are associated with the patient

patient\_pmp - prescription monitoring program database results for the patient

patient\_referrals - referrals sent out to other providers on behalf of the patient

**ptinr** - if the patient requires periodic prothrombin time(PT) and international normalized ratio(INR) tests, this documents the reason for the test and the frequency decided by the provider

ptinr\_log - connected to ptinr table, logs all pt/inr test results for the patient

schedules - Scheduled appointments associated with the patient

### patientinfo

Basic identifying information about the patient (dob, chart number, ssn), demographic information for the patient, and some medical or social history questions as customized by the clinic.

| Field Name             | Description                                |
|------------------------|--|
| patientid              | system identifier of patient               |
| lastname               | Patient last name                          |
| firstname              | Patient first name                         |
| chartnumber            | Patient chart number                       |
| ssn                    | Patient social security number             |
| dob                    | Patient Date of birth                      |
| address1               | Patient street address                     |
| address2               | Patient street address line 2              |
| city                   | Patient city                               |
| state                  | Patient state                              |
| zip                    | Patient zip code                           |
| prev_addr              | Patient's previous addresses               |
| country                | Patient country                            |
| mainphone              | Patient's main phone number                |
| mainphone_ext          | Patient's main phone number extension      |
| altphone               | Patient's alternate phone number           |
| altphone_ext           | Patient's alternate phone number extension |
| workphone              | Patient's work phone number                |
| workphone_ext          | Patient's work phone number extension      |
| emergency_contact      | Patient's emergency contact number         |
| emergency_contact_name | Patient's emergency contact name           |
| email                  | Patient's email                            |
| marital_status         | Patient's marital status                   |
| primary_physician      | Patient's primary physician                |
| primary_location       | Patient's primary location                 |
| chrGender              | Patient's gender [1=male, 2=female]        |

| chrGenderIdentity     | Patient's gender identity                               |
|-----------------------|---|
| chrSexualOrientation  | Patient's sexual orientation                            |
| chrBirthSex           | Patient's birth sex                                     |
| provider              | Patient's provider                                      |
| preffered_language    | Patient's preferred language                            |
| preferred_comm        | Patient's preffered method of communication             |
| ethnicity             | Patient's ethnicity                                     |
| referring_physician   | Patient's referring physician                           |
| primarycare_physician | Patient's primary care physician                        |
| employer_name         | Employer's name   |
| employer_address1     | Employer's address                                      |
| employer_address2     | Employer's address                                      |
| employer_city         | Employer's city   |
| employer_state        | Employer's state  |
| employer_zip          | Employer's zip code                                     |
| date_of_injury        | Patient's date of injury                                |
| accident_type         | Patient's accident type                                 |
| accident_state        | Patient's accident state                                |
| financial_class       | Patient's financial class                               |
| patient_type          | Patient type  |
| status                | if patient is active or inactive [0=active, 1=inactive] |

### charges

All CPT charges associated with the patient's account

| Field Name | Description  | Schema                                     |
|------------|--|--|
| charges_id | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |
| scheduleid | identifier of patient's visit                      | 32 digit GUID                              |
| patientid  | identifier of the patient                          | 32 digit GUID                              |
| date       | Date of charge                                     | date as Y-m-d                              |
| userid     | identifier of user that added the charge           | 32 digit GUID                              |

| charge               | charge code as CPT   | Date as Y-m-d            |
|----------------------|--|--------------------------|
| chargeHeading        | charge heading on superbill  | text                     |
| chargeDesc           | charge description   | text                     |
| chargeText           | text associated with charge  | text                     |
| numUnits             | number of units for charge   | integer                  |
| fee                  | fee associated with charge   | Number                   |
| verified             | if charge verified [0=no 1=yes]  | integer                  |
| caseType             | [New,Pending,Processed]  | text                     |
| charge_batch_number  | Batch number associated with charge                                    | integer                  |
| isExported           | if charge exported [0=not<br>exported, 1=set to export,<br>2=exported] | integer                  |
| exported_datetime    | Date charge was exported   | timestamp as Y-m-d H:i:s |
| export_error         | Error message associated with export                                   | text                     |
| billing_desc         | Billing description of charge  | text                     |
| sort_order           | Sort order of charge   | integer                  |
| charge_location_guid | identifier of location for charge                                      | 32 digit GUID            |
| time_last_modified   | Date time item last modified   | timestamp as Y-m-d H:i:s |

#### healthmaintenance

Scheduled recurrent diagnostic labs or tests the provider associated with the patient.

| Field Name           | Description  | Schema                                     |
|----------------------|--|--|
| healthmaintenance_id | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |
| patientid            | identifier of the patient                          | 32 digit GUID                              |
| name                 | Descriptive name of health maintenance item        | text                                       |
| frequency            | Recommended number of numbers item should reccur   | integer                                    |
| last_test_date       | Date of last test                                  | Date as Y-m-d                              |
| healthmaint_notes    | Notes about the item                               | text                                       |
| time_last_modified   | Date time item last modified                       | timestamp as Y-m-d H:i:s                   |

| inactive    | status of item [0=active, 1=inactive] | integer       |
|-------------|---------------------------------------|---------------|
| create_date | Date item was created                 | Date as Y-m-d |
| delay_days  | Number of days item has been delayed  | integer       |

### ob

#### OB report of pregnancy-related visits

| Field Name  | Description                    |
|-------------|--------------------------------|
| firstname   | Patient first name             |
| lastname    | Patient last name              |
| chartnumber | Patient chart number           |
| ssn         | Patient social security number |
| dob         | Patient Date of birth          |
| doctype     | ОВ                             |
| date        | Date of start of pregnancy     |
| filename    | Name of associated PDF file    |

### patient\_advforms

### Online patient forms

| Field Name          | Description  | Schema                                     |
|---------------------|--|--|
| patient_advforms_id | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |
| advform_id          | indentifier of the form template                   | 32 digit GUID                              |
| patientid           | identifier of the patient                          | 32 digit GUID                              |
| create_date         | Date form is created                               | date as Y-m-d                              |
| complete_date       | Date form was completed by patient                 | date as Y-m-d                              |
| user_data           | Patient answers to form questions as JSON          | JSON array                                 |
| sign_data           | Saved image of patient signature                   | image data                                 |
| form_audit          | Audit of form                                      | Text                                       |

| status             | Status of form                                    | [SENT, COMPLETED, CANCELLED] |
|--------------------|---|------------------------------|
| deleted            | if form was deleted [0=not deleted,<br>1=deleted] | integer                      |
| time_last_modified | Date time form last modified                      | timestamp as Y-m-d H:i:s     |

### patient\_codes

Codes of various code systems associated with the patient

| Field Name  | Description  | Schema                                     |
|-------------|--|--|
| item_guid   | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |
| patientid   | indentifier of the patient                         | 32 digit GUID                              |
| scheduleid  | identifier of schedule associated with code        | 32 digit GUID                              |
| code        | Code   | date as Y-m-d                              |
| value       | Value of code if necessary                         | JSON array                                 |
| units       | Units of value if necessary                        | 32 digit GUID                              |
| date        | Date of code                                       | date as Y-m-d                              |
| type        | Type of code                                       | Text                                       |
| link_table  | Table associated with code                         | Text                                       |
| link_guid   | GUID of the item code is related to                | 32 digit GUID                              |
| create_date | Date code created                                  | date as Y-m-d                              |
| create_user | Identifier of the user that created the code       | 32 digit GUID                              |
| description | Description of code                                | Text                                       |
| log_notes   | Any notes logged with code                         | Text                                       |

### $patient\_forms\_data$

Forms filled out for the patient

| Field Name            | Description  | Schema                                     |
|-----------------------|--|--|
| patient_forms_data_id | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |

| patientid   | indentifier of the patient                           | 32 digit GUID |
|-------------|--|---------------|
| form_guid   | identifier of the form questions template            | 32 digit GUID |
| date        | Date form created                                    | date as Y-m-d |
| response    | Form answers saved as a JSON array                   | JSON array    |
| physicianid | identifier of the physician associated with the form | 32 digit GUID |

# patient\_guarantor

Guarantor information and demographics associated with the patient

| Field Name           | Description  | Schema                                     |  |
|----------------------|--|--|--|
| patient_guarantor_id | identifier of this particular log/row in the table | 32 digit GUID (Globally Unique Identifier) |  |
| guar_acsid           | identifier for billing system                      | 32 digit GUID                              |  |
| patientid            | Patient identifier                                 | 32 digit GUID                              |  |
| guar_firstname       | Guarantor's first name                             | Text                                       |  |
| guar_middlename      | Guarantor's middle name                            | Text                                       |  |
| guar_lastname        | Guarantor's last name                              | Text                                       |  |
| guar_address         | Street address of guarantor                        | Text                                       |  |
| guar_address2        | Street address line 2 for guarantor                | Text                                       |  |
| guar_city            | Guarantor's city                                   | Text                                       |  |
| guar_state           | Guarantor's state                                  | Text                                       |  |
| guar_zip             | Guarantor's zipcode                                | Text                                       |  |

| guar_employer_state | Guarantor's employer state    | Text |
| guar_employer_zip   | Guarantor's employer zip code | Text |

# patient\_letters

Letters written by the clinic that are associated with the patient

| Field Name  | Description                    |
|-------------|--------------------------------|
| firstname   | Patient first name             |
| lastname    | Patient last name              |
| chartnumber | Patient chart number           |
| ssn         | Patient social security number |
| dob         | Patient Date of birth          |
| doctype     | LETTER                         |
| date        | Date of letter                 |
| filename    | Name of associated PDF file    |

# patient\_pmp

Prescription monitoring program database results for the patient.

| Field Name         | Description   | Schema                                     |
|--------------------|---|--|
| patient_pmp_id     | identifier of this particular log/row in the table      | 32 digit GUID (Globally Unique Identifier) |
| patientid          | indentifier of the patient                              | 32 digit GUID                              |
| narc_score         | Narcotics Score   | Number                                     |
| stim_score         | Stimulant Score   | Number                                     |
| sed_score          | Sedatives Score   | Number                                     |
| over_score         | Overall Score   | Number                                     |
| url                | URL to view entire report (accessible only by provider) | Text                                       |
| message            | Error Message   | Text                                       |
| ехр                | Date the url expires                                    | Y-m-d                                      |
| time_last_modified | date/time when row was last modified                    | Y-m-d H:i:s                                |

#### patient\_referrals

Referrals sent out to other providers on behalf of the patient

| Field Name      | Description  |
|-----------------|--|
| firstname       | Patient first name   |
| lastname        | Patient last name  |
| chartnumber     | Patient chart number   |
| ssn             | Patient social security number   |
| dob             | Patient Date of birth  |
| doctype         | REFERRAL   |
| date            | Date of referral created   |
| filename        | Name of associated PDF file  |
| from_provider   | Name of referring provider   |
| to_provider     | Name of provider referral sent to                                      |
| referral_reason | Reason for referral  |
| ccda_id         | Identifier of ccda, can match to ccda_[ccda_id].xml file inside folder |

### ptinr

For patient requires periodic prothrombin time(PT) and international normalized ratio(INR) tests, this documents the reason for the test and the frequency decided by the provider

| Field Name | Description   | Schema                                     |
|------------|---|--|
| ptinrid    | identifier of this particular log/row in the table    | 32 digit GUID (Globally Unique Identifier) |
| patientid  | indentifier of the patient                            | 32 digit GUID                              |
| diagnosis  | Diagnosis that warrants PT/INR tracking               | Text                                       |
| inr_range  | Provider selected ideal range of INR result           | Number                                     |
| date_stop  | Date to end PT/INR tracking                           | date as Y-m-d                              |
| comments   | Comments  | Text                                       |
| inactive   | if ptinr is active for patient (0=active, 1=inactive) | integer                                    |

| time_last_modified date/time when row last modified timestamp as Y-m-d H:i:s |  |
|--|--|
|--|--|

# ptinr\_log

Logs all pt/inr test results for the patient; Connected to ptinr table.

| Field Name         | Description  | Schema                                     |  |
|--------------------|--|--|--|
| ptinr_logid        | identifier of this particular log/row in the table                         | 32 digit GUID (Globally Unique Identifier) |  |
| ptinrid            | indentifier of the patient's PT/INR plan found as a row in the ptinr table | 32 digit GUID                              |  |
| date_entered       | Date results entered   | date as Y-m-d                              |  |
| date_drawn         | Date test drawn  | date as Y-m-d                              |  |
| tab_strength_old   | Strength of warfarin/coumadin  | Number                                     |  |
| doseage_old        | Dose of warfarin/coumadin  | Number                                     |  |
| dose_instr_old     | Instructions given about doseage   | Text                                       |  |
| value_pt           | Numerical value of PT result   | Number or Text                             |  |
| value_inr          | Numerical value of INR result  | Number or Text                             |  |
| next_log           | date of next PT/INR appointment  | Text                                       |  |
| notes              | User inputted log notes  | Text                                       |  |
| status             | 0= active log 1= inactive/deleted log                                      | integer (0 or 1)                           |  |
| status_userid      | identifier of user who created last updated the status                     | 32 digit GUID                              |  |
| userid             | identifier of user who created the log                                     | 32 digit GUID                              |  |
| time_last_modified | date/time when log last modified   | timestamp as Y-m-d H:i:s                   |  |

### schedules

Scheduled appointments associated with the patient.

| Field Name | Description | Schema |
|------------|-------------|--------|
|------------|-------------|--------|

| scheduleid      | unique identifier of the item                     | 32 digit GUID (Globally Unique Identifier) |
|-----------------|---|--|
| patientid       | EHR patient identifier                            | 32 digit GUID                              |
| doctorid        | identifier of the appointment provider            | 32 digit GUID                              |
| ob_pregid       | if a pregnancy visit, identifier of the pregnancy | 32 digit GUID                              |
| date            | date of the appointment                           | date as Y-m-d                              |
| time            | time of the appointment                           | time as H:i:s                              |
| end             | end time of appointment                           | time as H:i:s                              |
| location        |   |  |
| checkin_time    |   |  |
| checkin         |   |  |
| roomno          |   |  |
| firstname       |   |  |

### surgerymemo

Surgical documentation for patient

1 Custom function for specific clinic. Most clinics will have blank table.

| Field Name     | Description                                       | Schema                                     |
|----------------|---|--|
| surgerymemo_id | unique identifier of the item                     | 32 digit GUID (Globally Unique Identifier) |
| patientid      | EHR patient identifier                            | 32 digit GUID                              |
| date           | date of the surgery                               | date as Y-m-d                              |
| description    | description input by provider or user             | Text                                       |
| location       | location of the surgery                           | Text                                       |
| physician      | identifier of provider that performed the surgery | 32 digit GUID                              |

| date_entered | date surgery memo entered into system           | date as Y-m-d |
|--------------|---|---------------|
| userid       | identifier of user who created the surgery memo | 32 digit GUID |
